Education

University of Waterloo — Waterloo, ON
Bachelor of Computer Science (Co-op) — *Sept. 2024 – Aug. 2029*

Wilfrid Laurier University — Waterloo, ON
Bachelor of Business Administration (Co-op) — *Sept. 2024 – Aug. 2029*

Work Experience

Backend Process Developer — Dec. 2025 – May. 2026
Walden Homes — *Toronto, ON*

- Identified limited client visibility into budget, approval, and scheduling data across 12+ concurrent renovation projects and documented the end-to-end financial review workflow across large Smartsheet workbooks.
- Built a Node.js financial review dashboard using the Smartsheet API and OpenAI GPT-assisted summaries to transform live project records into client-facing metrics, status views, and automated weekly updates.
- Improved financial and operational transparency by giving clients continuous access to project status alongside concise weekly updates on progress, approvals, and budget position.

Office Clerk — Apr. 2023 – Aug. 2023
Softron Tax — *Brampton, ON*

- Identified repetitive scanning, renaming, and storage steps in the scan-to-archive GST document workflow and built a custom C CLI utility to batch-process directories and metadata through the existing Kofax Capture pipeline.
- Reduced repetitive clicks, renaming, and keyboard input across the scan-to-archive workflow, while also supporting walk-in clients and senior associates with GST return preparation and CRA Online filing.

Projects

secThing | *Local AI (Ollama), Next.js, PostgreSQL* — Apr. 2026 – Present

- Developing a self-hosted SEC research workbench to reduce reliance on paid research platforms and make primary filings easier to search, analyze, and verify through a private, evidence-first workflow.
- Built a Next.js, Fastify, PostgreSQL, and pgvector pipeline that ingests SEC EDGAR filings, supports full-text, semantic, and hybrid retrieval, and integrates Ollama-hosted embeddings and local language models for grounded RAG.
- Built an in-development 'Ask the filings' workflow that grounds AI responses in retrieved evidence and links citations to exact source passages, supported by caching, rate limiting, recoverable jobs, and automated testing.

SkyForger - MMO Market Tracker | *Next.js, Zod, Hypixel API* — Sept. 2026 – Oct. 2026

- Built a Hypixel SkyBlock forge-planning application to replace manual spreadsheet calculations for evaluating changing material prices, craft profitability, progression requirements, and limited forge capacity.
- Developed a Next.js and TypeScript analytics engine across 155 maintained forge and gemstone recipes, combining live Bazaar data with a fault-tolerant GitHub Actions pipeline for scheduled Auction House aggregation and validation.
- Delivered personalized profit rankings, recursive dependency planning, consolidated shopping lists, and forge-slot schedules using player progression and inventory data, while explicitly handling incomplete or uncertain market information.

Technical Skills

Programming Languages: Python, TypeScript, JavaScript, Go, Rust, C, C++, SQL, Bash
Frontend and Application Development: React, Next.js, Tailwind CSS, daisyUI, HTML/CSS, egui/eframe
Backend and Data: Node.js, Express.js, Fastify, REST APIs, PostgreSQL, pgvector, Background Workers, Data Ingestion Pipelines
AI and Retrieval: Ollama, llama.cpp, Retrieval-Augmented Generation (RAG), Embeddings, Semantic Search, Hybrid Retrieval
Infrastructure and Developer Tools: Docker, Docker Compose, Git, GitHub Actions, Linux, Make/Makefile, CMake, Zod, Playwright
